

# Level Indicators 4

## Gobius 4

Installed and ready to use in 30 minutes!

The Gobius level indicator is the first level indicator in the world that measures the contents of tanks in plastic, stainless steel, mild steel and aluminium from the OUTSIDE. Regardless of the tank's size and shape, or the amount of deposit on the inside of the tank wall, the Gobius is totally reliable.

No Drilling of Holes in the tank

Gobius - the only level indicator that measures from the outside of all tanks

The Gobius level indicator is based on the patented Gobius Technology, best described as knock and listen, which makes it possible to accurately measure the contents of all tanks.

Every sensor placed on the tank wall consists of a shaker and an accelerometer. When the shaker creates a vibration in the tank wall, the accelerometer measures the size of the vibration and passes the data on to the control unit. The control unit then calculates if the fluid level has passed the particular sensor or not.

Holding Tank Display

30 minutes to install including calibration

Installing Gobius to your tank is easy - it does not take more than 30 minutes. Instead of the traditional way of installing a level indicator, i.e. removing the tank and drilling holes, all you have to do is attach the sensors to the tank, connect the supplied wires and then calibrate the tank by pressing a button for a few seconds.

Water/Fuel Tank Display

Part No	Description
970091	Holding Tank in Stainless Steel or Aluminium
970053	Holding Tank in Plastic
970381	Water and Fuel in Stainless Steel or Aluminium
970193	Water and Fuel in Plastic
