

SERIES A RECTANGULAR TANKS

A range of rotationally moulded tanks suitable for water, diesel and waste.

These tanks are now being used by some of the leading British manufacturers.

Originally designed as marine tanks, they have been moulded in virgin grade Linear Medium Density Polyethylene resin, which is natural in colour.

The resin has a long term UV package and is suitable for use in or out of direct sunlight.

These tanks have been moulded to our specification, with a wall thickness of 9mm for tanks over 35 gallons. This extra thickness will combat any odour problems sometimes associated with cheaper thinner walled tanks when used in waste holding tank applications.

The tanks are shipped bare which means we can place fittings to customers requirements using our advanced heat fusion technology.

Please contact Tek-Tanks for a quotation.

All we require is a basic drawing showing the orientation of the tank and any fittings, hatches and senders required (please see fittings guide for sizes available).
